

Accessing the WVSU internet stream

- The WVSU live audio player requires Adobe Flash, version 10 or higher. Go to the [Flash web page](#) to check your version and download the latest.
- If you can't get the player to work, you can listen to the audio stream through other audio players, such as WinAmp, RealPlayer, or iTunes. To do that, find the option on the audio player to enter a URL, and enter:
http://broadcast.ic.inwd.net/stream/broadcast_samford_wvsu-fm.pls
- The WVSU internet stream can also be accessed with various mobile devices, such as the iPod Touch, iPhone and other smartphones with unlimited data plans. (We have successfully listened with an iPhone and a Blackberry 8320)
- To access with an iPhone/iPod Touch: Download and install the [FStream app](#). Set the stream URL to:
http://broadcast.ic.inwd.net/stream/broadcast_samford_wvsu-fm.pls, the type to [mp3](#), and the bitrate to [64K](#).
- To access with a Blackberry, download and install [BerryTunes](#). You may also need to use [this page](#) to set configurations on your phone, depending on your model and service provider.

If you continue to have problems, please contact us at <mailto:wvsu@samford.edu>.
